

Centor 335 Folding Door

For homeowners

centor®

Contemporary doors for every home

Folding doors allow you to open up entire walls of your home or conservatory to the outdoors. They flatten to the side so you can maximise, use and enjoy all of your available living space.

The 335 Folding Door (formally Centor C1) is Centor's most affordable thermally-improved aluminium folding door, with robust, square-cut corner construction. Available in both inward and outward opening configurations, the 335 is a bottom-rolling system, perfect for use in a renovation or conservatory where a structural beam is not required.

All Centor doors and windows are painted using our industry-leading paint process that provides the highest levels of corrosion resistance. Each extrusion that makes up the frame and panels is painted after cutting and machining have taken place, so every surface of the aluminium is coated.

- Aluminium, in a range of RAL colours.
- Bottom-rolling carriers feature self-cleaning wheels.
- Tamper-proof hinge flaps are fixed in the edge of the stile.
- Choice of sills available, including compact, easy access, low outward, low inward and flat.
- Intermediate panels are secured in one easy movement with the Centor Twinpoint lock.
- Double or triple glazing available.

Centor 335 Folding Doors are available exclusively through a network of Centor Dealers. You can experience the effortlessly smooth Centor 335 system at showrooms throughout the UK.

Easy locking

The Centor Twinpoint lock is simple to use, with an elegant central handle operating concealed top and bottom bolts to secure panels in one easy movement – no bending or reaching to unlatch tricky bolts.

Smooth operation

The doors will operate smoothly for years to come, thanks to Centor-grade engineering. The bottom-rolling carriers glide in a flat track on low-friction, self-cleaning wheels.

Lasting peace of mind

Should a property settle over time, panels can be adjusted both vertically and laterally, so the doors continue to glide smoothly with fingertip operation.
